

A ROCK AND A SOFT PLACE

Some delicate sleepers have partners about as delicate as a load of rocks. Getting a good night's sleep is a challenge. A quality mattress saves the day (or night), but not just any mattress. True Motion Separation, by InnerRest, is the key. Centrally-glued, ultrasonically encapsulated, coils dissipate motion and reduce partner disturbance. The result? A deeper, more refreshing, restorative sleep.

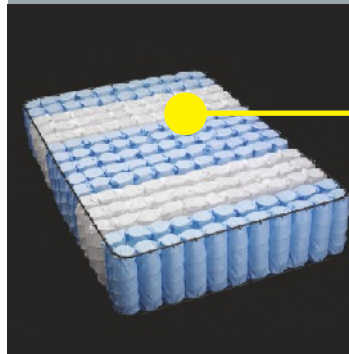

PARALLEL VS. NESTED

Parallel or nested constructions—or a mixture of both—provide versatility and flexibility, offering a range of coil counts to meet any application.

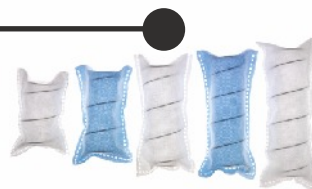

MULTI-GAUGE TECHNOLOGY

Innovative multi-gauge technology provides the opportunity for enhanced sleeper comfort through the use of strategic support zones.

RANGE OF COIL HEIGHTS

Coil heights from 3.5" to ultra high profile 8.5" designs create an enhanced feel, product appearance, and mattress assembly options.

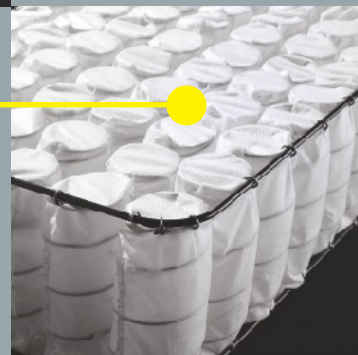

STANDARD OR FOAM-ENCASED

InnerRest Innersprings are available with or without border rods for foam-encased mattress construction.

PRE-ATTACHED BORDER RODS

Units are shipped with border rods already attached, saving labor costs and valuable storage space, and allowing you to quickly get the product onto the manufacturing floor.

SHIPPED FLAT BALED

InnerRest Innersprings are conveniently flat baled with attached six gauge border wires, saving time, space and the need for special unbalancing equipment.
